Overview

Virtual Piggy, Inc.'s Oink service is the first e-commerce solution that enables kids to manage and spend money within a parent-controlled environment. We deliver online security platforms designed for the Under 21 age group in the global online market, and also enable online businesses to function in a manner consistent with the Children's Online Privacy Protection Act ("COPPA") and similar international children's privacy laws. Oink enables the Under 21 audience to play, transact and socialize in a secure online environment guided by parental permission, oversight and control.

The purpose of this document is to provide the steps necessary for integrating the Oink Extension with Magento Community Edition (CE) and Enterprise Edition (EE)

System Requirements

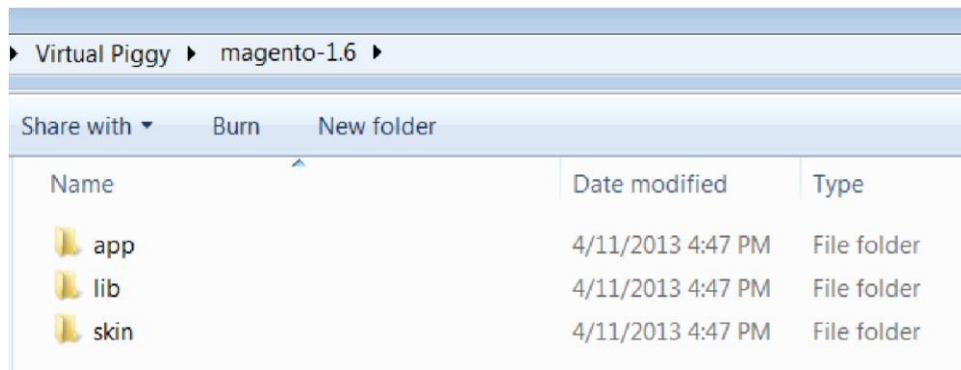

- Magento CE or EE: **1.6.10** and higher
- PHP 5.2 (minimum)
- PHP SoapClient library enabled (<http://www.php.net/manual/en/soap.setup.php>)
- cUrl library enabled (required by SoapClient)
- openssl library enabled (required by SoapClient)
- dom library enabled (required by SoapClient)

Oink Installation

After verifying the above System Requirements, the installation is virtually a drop and play installation. Copy the Oink Magento Extension to your website; the Magento Extension will do the rest (contact Virtual Piggy Sales or Integration team to receive a copy of the Oink Extension).

Step 1

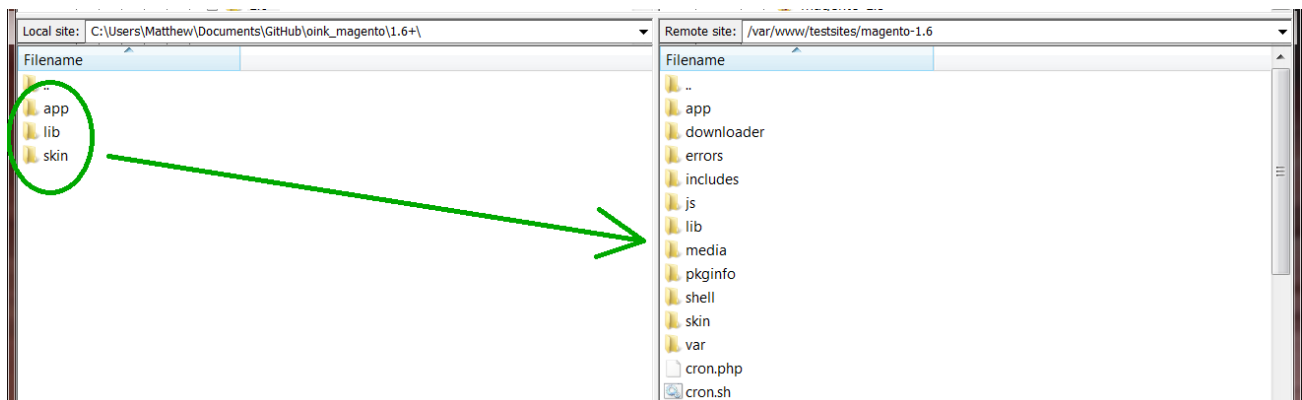

Unzip the Oink Extension; you should see the following folder structure.

Virtual Piggy ▸ magento-1.6 ▸		
Share with ▾ Burn New folder		
Name	Date modified	Type
 app	4/11/2013 4:47 PM	File folder
 lib	4/11/2013 4:47 PM	File folder
 skin	4/11/2013 4:47 PM	File folder

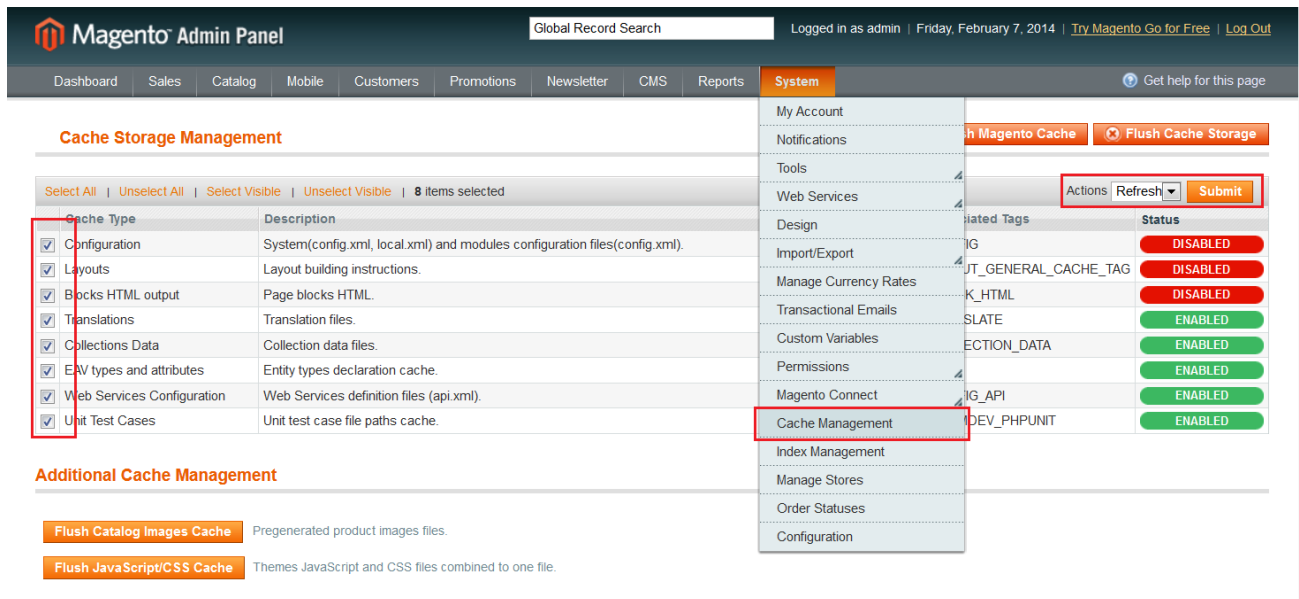

Step 2

Use FTP (Filezilla, etc.) to copy the folders app, lib, and skin to the root folder of your Magento installation.

Step 3

After copying the folders to your Magento installation, refresh your [Magento cache](#)

Cache Storage Management

Select All | Unselect All | Select Visible | Unselect Visible | 8 Items selected

Cache Type	Description
<input checked="" type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).
<input checked="" type="checkbox"/> Layouts	Layout building instructions.
<input checked="" type="checkbox"/> Blocks HTML output	Page blocks HTML.
<input checked="" type="checkbox"/> Translations	Translation files.
<input checked="" type="checkbox"/> Collections Data	Collection data files.
<input checked="" type="checkbox"/> EAV types and attributes	Entity types declaration cache.
<input checked="" type="checkbox"/> Web Services Configuration	Web Services definition files (api.xml).
<input checked="" type="checkbox"/> Unit Test Cases	Unit test case file paths cache.

Additional Cache Management

Flush Catalog Images Cache Pregenerated product images files.

Flush JavaScript/CSS Cache Themes JavaScript and CSS files combined to one file.

Cache Type	Status
Configuration	DISABLED
Layouts	DISABLED
Blocks HTML output	DISABLED
Translations	ENABLED
Collections Data	ENABLED
EAV types and attributes	ENABLED
Web Services Configuration	ENABLED
Unit Test Cases	ENABLED

Configure

Once you have all the files uploaded, you're ready to configure your Oink Extension. Oink configuration can be accomplished in a few easy steps.

Step 1

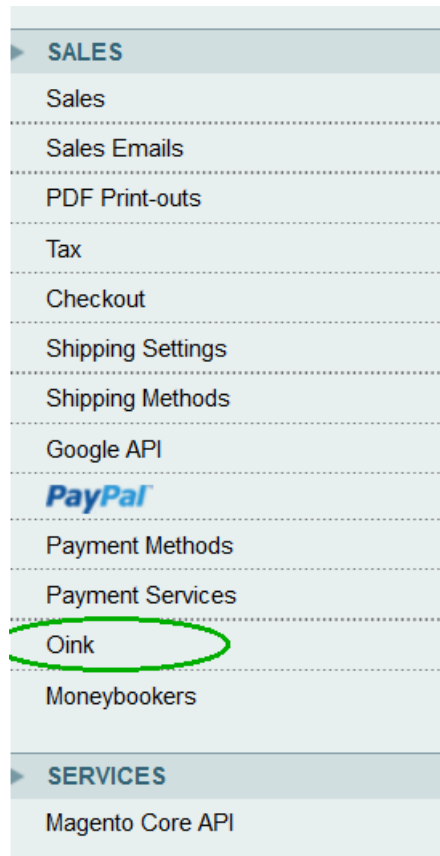

Navigate to Magento System Configuration by going to System > Configuration

The screenshot shows the Magento Admin Panel interface. At the top, there's a navigation bar with tabs: Dashboard, Sales, Catalog, Mobile, Customers, Promotions, Newsletter, CMS, Reports, and System. The 'System' tab is selected. Below the navigation bar, there's a 'Latest Message' banner. On the left, the 'Configuration' section is expanded, showing 'ETHEME OPTIONS' and 'Theme Options'. Under 'Theme Options', the 'GENERAL' sub-section is selected. The main content area displays 'Theme Options' with two sections: 'General Options' and 'Slideshow Options'. In the 'General Options' section, 'Menu type' is set to 'Wide Menu', 'Additional Navigation Link' is empty, 'Use Cufon' is set to 'Disable', 'Additional Navigation Link Url' is '#', and '"Back to top" button' is 'Enable'. In the 'Slideshow Options' section, 'Use Slideshow' is 'Enable', 'Autoplay' is 'Enable', and 'Speed' is '8000'. On the right side of the panel, a vertical menu lists various system configuration options: My Account, Notifications, Tools, Web Services, Design, Import/Export, Manage Currency, Transactional Emails, Custom Variables, Permissions, Magento Connect, Cache Management, Index Management, Manage Stores, Order Statuses, and Configuration. The 'Configuration' option is highlighted with a green circle.

Step 2

Navigate to the Oink configuration under the “Sales” tab located on the left navigation bar

Step 3

Enter Merchant info provided to you by the Virtual Piggy Integration Team.

Oink – Magento Integration

1221 Hermosa Ave, Suite 210, Hermosa Beach, CA 90254 | Suite 3C, 38 Jermyn Street, London, UK SW1Y 6DN

Step 4

Save your Oink Configuration changes.

The screenshot shows the Magento Admin Panel interface. At the top, there's a dark blue header with the "Magento Admin Panel" logo, a search bar, and user information. Below the header is a navigation menu with tabs like Dashboard, Sales, Catalog, Mobile, Customers, Promotions, Newsletter, CMS, Reports, and System (which is highlighted). On the left side, there's a sidebar with "Current Configuration Scope" set to "Default Config" and a "Configuration" section with "GENERAL" selected. The main content area shows the "Oink" configuration page. It has two sections: "Extension Info" with a "Version" of "3.0.4" and a "[STORE VIEW]" link, and "Merchant Info" with a "Transaction Service URL" of "https://integration.virtualpiggy.com/Services/Transact" and a "Merchant Identifier" of "74cf12d0-c24d-4e0a-9172-7b8c7b344475". Both sections have "[STORE VIEW]" links. In the top right corner of the configuration area, there is an orange "Save Config" button with a circular arrow icon, which is circled in green.

That's it! You should now see Oink as an available payment option on your Check Out page
